## PROFILE SUMMARY

Passionate and results-driven Full Stack Developer with 5+ years of experience in building scalable, secure, and high-performance web and mobile applications. Proficient in PHP (Laravel), Flutter, Firebase, Supabase, MySQL, and frontend technologies including Next.js, ReactJS, Tailwind CSS, and Bootstrap. Skilled in designing APIs, real-time data handling, database architecture, and server deployment.

Experienced with third-party integrations, cron jobs, and automating backend operations. Adept at using modern AI tools like v0, Cursor, Lovable, and Bolt to streamline development workflows. Familiar with Figma for UI/UX design. Strong understanding of clean code principles, MVC architecture, TDD practices, and collaborative agile development.

---

## KEY SKILLS

- **Backend:** PHP (Core, Laravel 12), CodeIgniter
  - **Frontend:** Next.js, ReactJS, Blade Templates, Alpine.js, TailwindCSS, Bootstrap
  - **Mobile Development:** Flutter (API integration, real-time sync, cross-platform apps)
  - **Databases:** MySQL, Supabase, Firebase (Realtime & Firestore)
  - **Dev Tools:** Git, GitHub, Postman, Figma, VSC, Gimp, Word, Excel
  - **Deployment:** Apache, Nginx, Shared Hosting, VPS, Cron Job Automation
  - **Testing:** PHPUnit (Unit/Feature Testing)
  - **Practices:** MVC, RESTful APIs, TDD, Repository Pattern, Clean Architecture
  - **AI Dev Tools:** v0.dev, Cursor, Lovable, Bolt
- 

## PROFESSIONAL EXPERIENCE

### Full Stack Developer - Arkmedis Edutaint Private Limited (Aug 2021 - Present)

- Developed scalable academic platforms and cross-platform Flutter mobile apps.
- Built and integrated secure APIs with real-time database communication using Firebase and Supabase.
- Automated backend operations using cron jobs and optimized database queries for large data volumes.

- Deployed applications on VPS servers with proper security hardening and SSL setup.
- Utilized v0.dev and Cursor to accelerate frontend development and simplify API integration.
- Implemented UI components using TailwindCSS and improved app responsiveness across devices.
- Collaborated with stakeholders to gather requirements and deliver production-ready solutions.

### **PHP Web Developer - Hyse Software Solutions**

- Delivered end-to-end project life cycles using CodeIgniter and Laravel.
  - Built custom APIs, designed secure database architectures, and deployed apps on shared servers.
  - Developed internal admin panels, CMS systems, and role-based dashboards.
- 

## **PROJECT EXPERIENCE**

### **ArkVault – Secure Password Management System**

**Tech Stack:** Supabase, Next.js, TailwindCSS, Firebase, V0, Cursor (IDE), Vercel, Laravel, MySQL, Firebase, Bootstrap, TailwindCSS

**ArkVault is a secure and elegant web-based password vault designed for both personal and organizational use. It enables users to store passwords with structured labels, monitor password usage lifecycle, and share them securely via email. Built using AI-powered tools like V0 and Cursor, the product was rapidly developed and deployed on Vercel for fast and reliable access.**

#### **Core Features:**

- Category-wise password storage with tags, activity history, and usage lifecycle tracking
- Secure password sharing over email with time-based expiry and access control
- Real-time notifications for unused passwords and updates via Firebase Cloud Messaging
- Admin panel for managing users, logs, and breach alerts
- Clean UI built using V0 (AI design tool) and deployed on Vercel

#### **My Contribution:**

- Built both frontend and backend of the application using Cursor IDE for API development and Supabase as the database.
- Designed a clean and intuitive UI using V0 (AI UI builder) and integrated all functionality with Next.js.
- Developed secure APIs for password management, lifecycle tracking, and sharing functionality.
- Integrated Firebase for real-time alerts and used FCM for notifications.

- Managed complete deployment and versioning using Vercel.

## **Academic Learning Platform**

**Tech Stack:** Laravel, Flutter, Firebase, MySQL, TailwindCSS

An interactive online learning platform built to provide children with animated academic courses and digital engagement with instructors. The platform aimed to simplify the education process with:

- Engaging animation-based course content accessible via web and mobile
- Instructor-student interaction through digital assignments, chat, and video modules
- A dynamic admin dashboard to manage students, instructors, subjects, and course scheduling
- Role-based access and course monitoring with performance analytics

### **My Contribution:**

- Developed the entire Laravel backend, including course modules, user roles, dashboards, and reporting
- Integrated Firebase for real-time notifications and user authentication
- Handled MySQL database schema design and optimized relational queries
- Implemented cron jobs for automated reminders, daily progress reports, and content publishing
- In the Flutter mobile app, contributed to the authentication module and course interaction module allowing students to access lessons, submit assignments, and receive real-time feedback
- Deployed on Server with performance tuning, SSL configuration, and secure backup systems

## **DreamsDecoder – Dream Interpretation Mobile App**

**Tech Stack:** Flutter (DDD Architecture), Laravel, MySQL, Firebase Realtime DB, FCM, Pusher  
DreamsDecoder is a mobile application that enables users (Customers) to record and submit dreams, which are then interpreted by designated Masters (experts). The system supports rich voice message handling, chat features, and real-time notifications, creating a unique spiritual and psychological interaction platform.

### **Core Features:**

- Role-based flow for Customers and Masters with automated dream assignment based on expert availability
- Users record voice notes or chat text describing their dreams; responses are returned by assigned Masters

- Integrated **Firestore Realtime Database** for live chat, **Firestore Cloud Messaging (FCM)** and **Pusher** for notifications
- Admin dashboard to monitor dream submissions, master activity, user traffic, and response SLAs
- Backend in Laravel managing user registration, dream tracking, data storage, and analytics
- Crashlytics for mobile performance monitoring and error tracking

#### **My Contribution:**

- Built the **entire Laravel backend**, including dream submission APIs, chat sync, and auto-assignment logic
- Implemented **Firestore integration** for chat and push notifications
- Designed MySQL database schema for user interactions and content storage
- Contributed to mobile side with Flutter modules for authentication, voice recording upload, and chat interface
- Developed the admin panel to track active users, pending dreams, and master responses

### **HappyFasting – Intermittent Fasting Tracker App**

**Tech Stack:** Flutter, Laravel, MySQL, Firestore, FCM, Crashlytics

HappyFasting is a mobile app that helps users manage intermittent fasting plans and achieve health goals like weight loss, improved metabolism, and better energy levels.

#### **Core Features:**

- Users log dietary preferences and select fasting plans (12:12, 14:10, 16:8, 20:4)
- Timer-based tracking system to monitor fasting and eating windows
- Personalized dashboard to view progress, goals, and streaks
- Food suggestions and hydration reminders based on selected plans
- Admin dashboard to manage users, plans, content, and monitor app performance
- Firestore Cloud Messaging (FCM) and Crashlytics for real-time notifications and error monitoring

#### **My Contribution:**

- Developed the **Laravel backend**, including plan logic, timer management, and notification scheduler
- Designed **MySQL database schema** to support user activity tracking and plan recommendations
- Built core **Flutter modules** for onboarding, fasting timer, goal tracking, and push alerts
- Integrated Firestore services for crash reporting and app engagement

- Ensured a clean architecture approach using DDD (Domain Driven Design) for scalability

### **ShreeShreta Oils – Olive Oil eCommerce Website**

**Tech Stack:** Laravel, MySQL, Bootstrap, Razorpay An eCommerce platform developed for ShreeShreta Oils to promote and sell premium olive oil products online. The website focuses on a clean shopping experience and health-focused content to build trust among customers.

#### **Core Features:**

- Product catalog with detailed descriptions and images
- Shopping cart, coupon handling, and secure checkout process
- Admin panel to manage inventory, orders, and customer queries
- Razorpay payment gateway integration
- Mobile-responsive UI with Bootstrap

#### **My Contribution:**

- Developed backend modules for order processing, user registration, and product management using Laravel
- Designed MySQL schema for efficient order tracking and stock updates
- Integrated Razorpay for secure and seamless payment flow
- Built the admin dashboard for real-time sales tracking and user management

### **Hetafu Games – Brain Training Gaming Portal**

**Tech Stack:** Laravel, MySQL, Bootstrap, Firebase A web-based brain training platform designed for children, featuring a suite of Unity-based embedded games focused on cognitive enhancement. The portal encourages daily engagement and tracks user performance through score submissions and activity streaks.

#### **Core Features:**

- Embedded Unity games with backend score tracking and session logs
- User profile system with progress graphs, daily streaks, and leaderboard modules
- Admin panel for managing users, games, and performance reports
- Firebase Cloud Messaging for real-time alerts and engagement prompts

#### **My Contribution:**

- Developed the **Laravel backend**, handling game session data, score submissions, and leaderboard calculations
- Created **MySQL schema** optimized for session tracking and daily activity logs
- Built admin interfaces to manage users and monitor gameplay stats

- Integrated Firebase notifications for user retention and updates

## **UTSAVPLANS – Event Service Marketplace**

**Tech Stack:** Laravel, Alpine.js, MySQL, Bootstrap, Firebase

UTSAVPLANS is an end-to-end online celebration service marketplace aimed at connecting users with verified local service providers for personal and official events. *This project is currently in the development stage with several modules already functional and others under active progress.* The platform allows customers to explore and book services such as banquet halls, photographers, decorators, caterers, and more.

### **Core Features:**

- Role-based user system for Admin, Service Providers, and Customers
- Interactive dashboards for booking management, payments, order status, and calendar view
- Vendor module to list services, manage availability, track leads, and view analytics
- Integrated Firebase for real-time user updates, order status alerts, and admin notifications
- Booking confirmation system with invoice generation, cancellation management, and feedback
- SEO-friendly dynamic pages for improved organic reach and vendor discovery

### **My Contribution:**

- Led the entire backend development using Laravel, including authentication, user flow, booking engine, and payment modules
- Designed and managed MySQL database schema, optimized for multi-role usage
- Created responsive web components using Alpine.js and Bootstrap, tailored for vendor and customer needs
- Integrated Firebase for live updates and notifications between vendors and customers
- Built and deployed the full platform on shared hosting with proper SSL and domain mapping
- Contributed to UI/UX through Figma prototypes and improved user onboarding flow
- Strategized and executed service provider onboarding and SEO-based content rollout for East and West Godavari regions

## AL Najma Waste Collection ERP System — Detailed Description

**Tech Stack:** Laravel 12, Alpine.js, MySQL, Firebase

**Duration:** Jan 2025 – Apr 2025 (Freelance Project)

**Client:** AL Najma Waste Collection Services (Dubai)

A comprehensive ERP solution designed specifically for waste collection businesses with multiple branches. This system automates operations from pickup scheduling to invoicing and finance tracking, tailored for the environmental services industry.

### Core Modules:

- **Branch Management:** Multi-branch structure to assign users, trucks, and responsibilities separately
- **Client & Contract Management:** Add and manage client details, contract timelines, and service types
- **Route Scheduling:** Assign collection trucks and staff to dynamic pickup routes
- **Collection Logs:** Capture daily collection data (quantity, type of waste, time, location)
- **Invoicing & Payments:** Auto-generate monthly invoices with downloadable PDFs, payment tracking
- **Real-time Notifications:** Firebase-based alerts for schedule changes and overdue payments
- **Analytics Dashboard:** Visual charts and KPIs to track monthly revenue, pickups, due amounts
- **User Roles:** Admin, Accountant, Field Operator – each with custom permissions

### My Contribution:

- Built the entire backend using Laravel 12 following the repository pattern and clean architecture
- Designed modular components for dynamic reporting, invoice generation, and financial summaries
- Integrated Firebase for real-time event updates, including notification triggers and payment alerts
- Created visual dashboards for tracking daily pickups, income, and overdue clients
- Implemented cron jobs for generating reminders, overdue notices, and monthly billing cycles
- Ensured role-based secure access and branch-wise data segregation
- Deployed the application to Shared Hosting and optimized for performance and reliability

## **CRM System for Product Collaboration**

**Tech Stack:** CodeIgniter, MySQL, Bootstrap

A lightweight CRM system built to support internal product collaboration, lead tracking, and sales performance monitoring.

### **My Contribution:**

- Developed user role modules, lead pipelines, and reporting dashboards
  - Integrated secure login with custom access controls
  - Designed responsive UI using Bootstrap and deployed on shared hosting
- 

## **EDUCATION**

Bachelor of Technology (B.Tech) – Computer Science Engineering (2015 – 2019)

---

## **CAREER OBJECTIVE**

To obtain a challenging position as a Full Stack Developer where I can leverage my technical expertise, leadership, and creative problem-solving skills to build impactful digital solutions while continuing to learn and grow professionally.
